# WHY CIRCULAR, WHY NOW?

## 90%
of land-based biodiversity loss and water stress are caused by raw material extraction and processing.

## 90%
of the resources consumed worldwide end up in waste.

## US$62 billion
worth of recoverable natural resources used in electronics alone is lost every year as waste.

## US$80-120 billion
of plastic packaging material value is lost to the economy after a short first use, equal to about 95% of its total value.

## US$4.5 trillion
in additional economic output could be generated by a circular economy by 2030.

## 3.9 million
people in Europe are estimated to be employed in jobs directly associated with the circular economy in 2018.
